

Studio Windows.

We realize that what our clients product centres on the Studio window, that's why we pay particular attention to this aspect. Though subject to continuing developments and improvements, the current options are:

- 16mm thick, pure clear, laminated Glass (not the standard available green) Our windows work perfectly with in conjunction with Rosco View, and cause no distortions.
- If desirable; Cast Acrylic, or Polycarbonate (curved windows).
- The window frames are mounted in tracks, and pivot on their centre axis, resulting in the option of continuous variable inward, or outward tilt, or to “drop” the window out altogether.
- Remote controlled sunshade, which extends out up to 2m, at variable angles, without any front supports (wind permitting).
- Filter roller system, which can contain two separate filters, i.e. Rosco View, ND, mesh.
